Zamberlan Logger Pro GTX RR S3

DISCRIPTION

Cut-resistant, anti-perforation, anticrushing, antistatic and anti-static: the new Zamberlan boot for outdoor work combines comfort and safety in a very durable boot.

It is a Made in Italy product complying with the standards from the harmonized EN ISO 17249+AC:2014, and aligned with the additional requirements of EN ISO 20345:2011.

With 3 aramidic fabric layers this boot offers the highest protection against chainsaw cuts (level 3=28 m/s). The aluminium toe cap protects toes from crushing, while the anti-perforation construction - a polypropylene and fiberglass insole and a TPU layer - provides protection from sharp elements. The 5011 LOGGER PRO GTX RR S3 is equipped with the VibramTeton outsole with antistatic compound and it is crampons compatible.

This shoe is small, better take one size larger!
